

# Volume 64-bit computing is here... is your business READY?

## AMD Opteron™ Processor-Based Server Evaluation Program

**AMD Opteron™ Processor Development Platform - Based on the Newisys™ design.** For the first time, servers based on the AMD Opteron™ processor are available for review. This early technology program enables customers to purchase access to pre-production AMD Opteron™ processors within the robust Newisys 1U 2P design, enabling server availability through select channel partners.

### The Newisys 1U 2P AMD Opteron™ processor-based server features:

#### *Performance and Compatibility for the Enterprise*

- High performance server solution for 32-bit and 64-bit enterprise applications
- Balanced server design with robust I/O to match the server's processor capability and deliver compelling real workload performance

#### *Superior System & Power Management Tools*

- 100% lights out remote management with a choice of management interfaces: secure web-based GUI, secure command line interface or SNMP integration
- Comprehensive suite of environmental, power, hardware, and BIOS/OS management features

### AMD Opteron™ Processor

The AMD Opteron™ processor enables you to easily transition to 64-bit computing at your desired pace without sacrificing 32-bit performance. You can rely on AMD Opteron™ processors to help provide a seamless integration with 64-bit applications, and you can be assured your servers will run smoothly today and tomorrow. The AMD Opteron™ processor is scheduled to be available in the first half of 2003. For more information, please visit [www.amd.com/opteron](http://www.amd.com/opteron).

### About Newisys

Newisys, a world-class team with decades of server industry experience, has harnessed the power of the AMD Opteron™ processor to deliver a better platform choice for Windows® and Linux server environments. The team has developed a robust family of server designs for the most demanding corporate server environment; featuring superior system management, power management and modular scalability.

# AMD Opteron™ Processor-Based Server Evaluation Program

## CONFIGURATIONS

The AMD Opteron™ Processor-Based Server Evaluation Program units are available in two (2) configurations, depending on your testing needs.

### Configuration A

#### Computational and Database Servers

CPU	Two (2) AMD Opteron™ processors
Memory	8 x 1 GB PC2100 DDR SDRAM
HDD	1 x 36 GB 15K RPM U320 SCSI HDD

### Configuration B

#### Edge of Network Servers

CPU	Two (2) AMD Opteron™ processors
Memory	4 x 512 MB PC2100 DDR SDRAM
HDD	1 x 36 GB 15K RPM U320 SCSI HDD

Both configurations are equipped with:

SCSI Controller	Embedded U320 controller with integrated mirroring support
Network I/O	Dual embedded Gigabit Ethernet
PCI I/O	Two (2) PCI-X expansion slots: 1 full length 133 MHz/64-bit, 1 half length 66 MHz/64-bit
Other I/O	Internal CD-ROM & Floppy drives
	Embedded SVGA video, serial, keyboard & mouse connectors
Management	Service processor running embedded Web server and SSL encryption for secure web-based management from anywhere and dedicated 10/100 Ethernet connection to a management network.

## Availability

The AMD Opteron™ processor-based server evaluation systems are scheduled to be available in February 2003.

For more information about this program or to see a list of authorized Program System Builders, please visit
